

Redica Insights for Food and Cosmetics

Data analytics for simpler, smarter quality and regulatory intelligence.

To make meaningful enforcement planning and decision making, you need reliable, real-time, and high-quality sources for a broad set of regulatory data. Current approaches fall short due to difficulties in acquiring high-quality datasets, handling varying velocities of data delivery, and normalizing across multiple data formats. All of this makes it impossible to organize. Redica Systems is here to help food and cosmetics firms make sense of all these datasets to turn it into meaningful information.

IMPROVE OVERSIGHT INTO INGREDIENT MANUFACTURERS WITH OUR ACTIONABLE DATA INTELLIGENCE

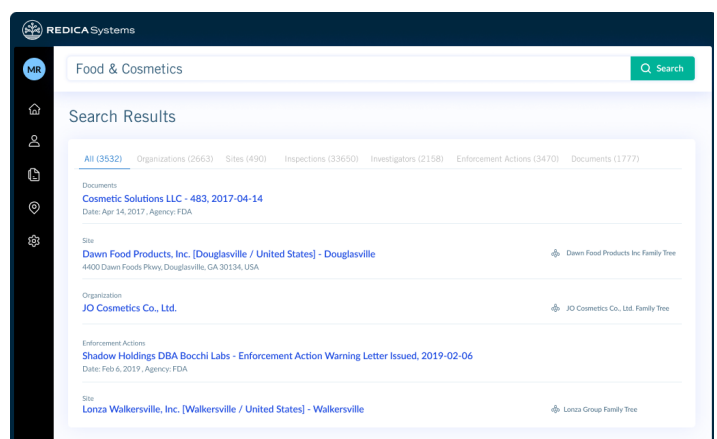

We'll help you search, analyze, and derive valuable insight from thousands of data points covering ingredient and meat suppliers, CoMans, and food manufacturers across the FDA, USDA, and State Health Agencies.

Tailor insights to your specific compliance and risk concerns

ONE SEARCH

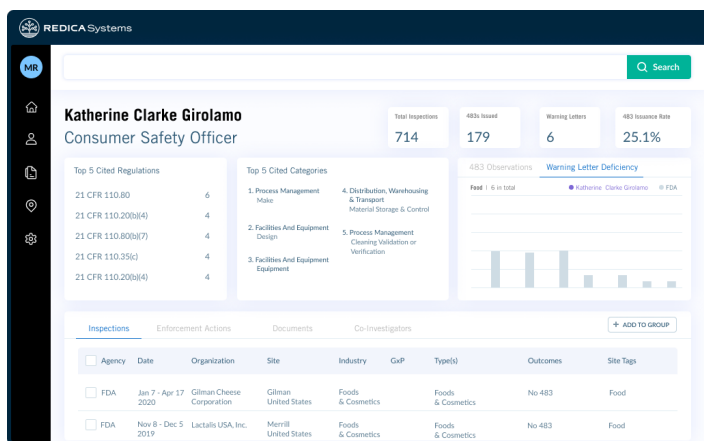

We'll help you search, analyze, and derive valuable insights from thousands of global regulatory data points covering food and cosmetics facilities, products, organizations, and enforcement.
